Convertilizer

Welcome to **Convertilizer**.

Convertilizer is a simple **Java Web Start** application to convert volumes or **TIFF** image stacks from one format to another (including **AVI** or **MOV** movie formats).

Contents

Instructions

Simply click below to start.

You will be presented with a small dialog box into which you can type the path of the input file or collection of **TIFF**s (or you can use the **Browse** button to navigate your files.

When you select a file, you'll automatically be given a set of appropriate output formats.

Click **Convert** to run the processing.

This is a *test implementation*. Use with caution. Save your work often. Make backups.

Distribution

Click here to run.

In Case of Error or Problems:

Email Steve Lamont. Error message text, screen shots of anomalous behavior, or other relevant information are always helpful and welcome.
