Export Sequences from Semantic Browser

This guide describes how to export sequence data. The "Export Data" button only shows up on sequence panel, on the bottom bar, next to the refresh button. When a user reaches a panel of raw sequences, RNA sequences, constructed sequences, or protein sequences, do the following steps to export sequences:

- Click the "Export Data" button on the bottom bar.
- Enter a name for the data file, e.g. my_export_1, Click "OK".
- Download the data from portal, under tab "Download User Sequences" of "Browse Data".
